Software AG (**SAG**) is global leaders in Business Processes, Integrations and Big Data. They are the first high - performance transactions; database, Adabas, the first business process analysis platform ARIS, the first B2B Server and SOA - based integration platform, webMethods, and pioneering big data technology with Terracotta's Big Memory. They offer a variety of end to end solutions that deliver low cost of ownership and high ease of use. ARIS, webMethods, Adabas, Natural, Centrasite, Terracotta and IDS Scheer Consulting represents an unique portfolio encompassing : process strategy, design, integration and control : SOA - based integration and data management ; efficient management of big data ; process - driven SAP implementation; and strategic process consulting and services.

Qlik® delivers intuitive platform solutions for self-service data visualization, guided analytics applications, embedded analytics and reporting to approximately 35,000 customers worldwide. Companies of all sizes, across all industries and geographies, use Qlik solutions to visualize and explore information, generate insight and make better decisions. Qlik optimizes Business Intelligence (BI) by harnessing the collective intelligence of people across an organization. Qlik focuses on empowering people—by enabling everyone in an organization to see the whole story that lives within their data.

SAP is the enterprise application software market leader, helping companies of all sizes and industries run better. From back office to boardroom, warehouse to storefront, desktop to mobile device, SAP helps people and organization work together efficiently and use business insight effectively to stay ahead of the competition. SAP application and services enable more than 1197,000 customer to operate profitably, adapt continuously, and grow sustainably .

Amazon Web Services (**AWS**) offers cloud web hosting solutions that provide businesses, non-profits, and governmental organizations with a

flexible, highly scalable, and low-cost way to deliver their websites and web applications. Amazon Web Services offers a broad set of global cloud-based products including compute, storage, databases, analytics, networking, mobile, developer tools, management tools, IoT, security and enterprise applications. These services help organizations move faster, lower IT costs, and scale. AWS is trusted by the largest enterprises and the hottest start-ups to power a wide variety of workloads including: web and mobile applications, game development, data processing and warehousing, storage, archive, and many others.

IBM has been present in India since 1992. IBM India's solutions and services span all major industries including financial services, healthcare, government, automotive, telecommunications and education, among others. As a trusted partner with wide-ranging service capabilities, IBM helps clients transform and succeed in challenging circumstances. The diversity and breadth of the entire IBM portfolio of research, consulting, solutions, services, systems and software, uniquely distinguishes IBM India from other companies in the industry. IBM has been expanding its footprint in India - and has a presence in over 200 cities and towns across the country - either directly or through its strong business partner network

EnterpriseDB is the only world wide provider of enterprise-class products and services based on PostgreSQL, the **ENTERPRISEDB** world's most advanced and independent open source database. EnterpriseDB was founded in 2004 with the goal of disrupting the database oligopoly with an equally capable product based on open source principles and development that offered dramatic cost savings. The company chose PostgreSQL as its technology foundation because PostgreSQL was proven by over 20 years of large-scale commercial deployments, its thriving developer community, and its reputation for being the strongest open source database available. With thousands of customers worldwide, including ABN AMRO Bank, Group BBVA, Deutsche Börse AG, KT Corp., NTT, Sony and hundreds more, EnterpriseDB has earned the reputation as a trusted technology and business partner

Business Analytics

Claylogix has excellent skills sets in Business Intelligence using Qlik products

Qlik View- Guided Analytics is the most powerful analytics solution today, so powerful that it was classified as a Business Discovery solution. It is able to consolidate information from different sources such as databases , Excel files , TXT , CSV and any other enterprise systems such as ERPs , CRMs and even social networks to present them in a single graphical interface intuitively and with visual quality than their competitors.

The Qlik Sense - Self Service Analytic for Business users, is for individuals or organizations who seek an easy and intuitive application that does not require programming to create views . Its users are free to follow their intuition and explore information from different sources , creating relationships that could be hidden in modeling of traditional BI systems

Business Process Management

Business processes are at core of what makes a business stand out—and what differentiates it from the competition. Business processes that deliver the promise of, business visibility, operational experience, and agility give the firm an winning edge over the competition. Especially In today’s world, where change is the only constant and with newer challenges every day, the need to innovate is imperative. Business performance analysis involves the application of strategic, tactical, and operational methods according to different criteria: target group, aggregation of results, and the time factor. Business performance is typically associated with the figures used to measure financial success, such as revenues, profits, cash flow, etc. Normally; however, it is not possible to influence these financial indicators directly; rather, they are the result of business processes that represent the organization’s operational activities.

Cloud Services

Migrate existing on premise workloads to the cloud. Migrate on premise databases to the cloud leveraging the database-as-a-service offerings. Cloud native application development leveraging the Cloud Best Practices. Assist in the cloud adoption strategy based on evaluation of the existing applications

Database Management Services

Everyday enterprises end up creating volumes of data in the form of invoices, customer details, financial information, regulatory filings, email communication, etc. As such, their databases experience push and pull actions from every stakeholder. Business users often find themselves struggling while performing tasks like storing, retrieving and sharing data. This hampers business performance, and employee productivity, especially when it is a customer-facing business process, thus leading to service delays and dissatisfaction. Managing databases for business effectiveness cannot be more stressed. ClayLogix Database Management Services (DBMS) assures a 24x7 availability of your database systems.

Database Migration Services

Data migration typically takes 30 to 40 percent of the effort in any new application project. Whether you're implementing an entirely new enterprise application or consolidating, upgrading, or modernizing an existing one, a strong focus on data migration is essential to your overall project success. Platform Modernization supplements or replaces a company's restrictive legacy applications and database technologies with newer, open-standards-based applications and databases—while retaining existing business content.

Database migration projects are not always limited to database migrations. In fact, many projects entail operating system (OS) migrations, application migrations, interface rewrites, application redesign, server consolidations and virtualization, and platform standardization, to name a few. In many instances, these additional migrations make sense, since they add business value by providing an excellent return on investment (ROI) for executive management.

Most clients have their own reasons for considering a migration. Although their reasons were different, such as lack of standardization, lack of DB resources, or support and maintenance costs; each customer had the same goal in mind: Achieve a strong ROI and an upgrade in performance, while mitigating their business risk. ClayLogix makes difference between with seamless migration with Zero Risk.

Enterprise Mobility

Mobility has nearly limitless potential to transform business, deliver faster response time, better customer service, improved productivity and increased sales. However, supporting, managing and securing your mobile deployment present numerous challenges. Mobile technology's complexity warrants the need to consider a mobile solution partner with experience in developing solutions across heterogeneous platforms and deploying mobile architecture that addresses this complexity and heterogeneity.

ClayLogix provides end-to-end mobility solutions, consulting and support services for applications developed on mobile platforms like iPhone and Android.

Application Development & Maintenance

Application development is a critical activity for nearly every organization. Do it right and you get great business benefits such as improved productivity, regulatory compliance, and reduced costs through automation.

ClayLogix provides custom application development services for both new development and maintenance of legacy applications. Our professionals provide the expertise to plan, design, build, test and implement applications fully integrated into your business process. This includes developing customized software for our clients using proven software engineering methodologies or commercial off-the-shelf (COTS) products tailored to fit your business needs. In this way, we develop software with reduced risk and decreased costs while increasing system functionality, reliability, and capability.

24X7 Managed Services

In today's world, Database and Application Infrastructure are critical components of enterprise IT. Against this backdrop, enterprises face continuing challenges in managing an increasingly complex and growing data portfolio while meeting business expectations for peak performance and accessibility. ClayLogix Supports Managed Services like Site Review and On-Boarding Service, 24x7x365 Performance Monitoring & Alerting, Weekly, Monthly or Quarterly Health Checks, Proactive Database Performance Tuning, Hotline Support Service, Management Information Reporting, Patch Management, Issue Resolution / Root Cause Analysis, Proactive Database Administration Services, Event and Case Reporting

Trainings

ClayLogix Offers trainings in BPM (using ARIS)

- Basic ARIS Designer
